

## Identifying needs in the early years

5.27 In addition to the formal checks, early years practitioners working with children should monitor and review the progress and development of all children throughout the early years.

5.28 Where a child appears to be behind expected levels, or where a child's progress gives cause for concern, practitioners should consider all the information about the child's learning and development from within and beyond the setting, from formal checks, from practitioner observations and from any more detailed assessment of the child's needs. From within the setting practitioners should particularly consider information on a child's progress in communication and language, physical development and personal, social and emotional development. Where any specialist advice has been sought from beyond the setting, this should also inform decisions about whether or not a child has SEN. All the information should be brought together with the observations of parents and considered with them.

5.29 A delay in learning and development in the early years may or may not indicate that a child has SEN, that is, that they have a learning difficulty or disability that calls for special educational provision. Equally, difficult or withdrawn behaviour does not necessarily mean that a child has SEN. However, where there are concerns, there should be an assessment to determine whether there are any causal factors such as an underlying learning or communication difficulty. If it is thought housing, family or other domestic circumstances may be contributing to the presenting behaviour, a multi-agency approach, supported by the use of approaches such as the Early Help Assessment, should be adopted.

5.30 Identifying and assessing SEN for young children whose first language is not English requires particular care. Early years practitioners should look carefully at all aspects of a child's learning and development to establish whether any delay is related to learning English as an additional language or if it arises from SEN or disability. Difficulties related solely to learning English as an additional language are not SEN.

5.31 Where a child has a significantly greater difficulty in learning than their peers, or a disability that prevents or hinders a child from making use of the facilities in the setting and requires special educational provision, the setting should make that provision. In all cases, early identification and intervention can significantly reduce the need for more costly interventions at a later stage.

5.32 Special educational provision should be matched to the child's identified SEN. Children's SEN are generally thought of in the following four broad areas of need and support – see Chapter 6, paragraph 6.28 onwards, for a fuller explanation:

- communication and interaction
- cognition and learning
- social, emotional and mental health
- sensory and/or physical needs

5.33 These areas give an overview of the range of needs that providers should plan for. However, individual children often have needs that cut across all these areas and their needs may change over time. For instance speech, language and communication needs can also be a feature of a number of other areas of SEN, and children with an Autism Spectrum Disorder may have needs across all areas. The special educational provision made for a child should always be based on an understanding of their particular strengths and needs and should seek to address them all, using well-evidenced interventions targeted at areas of difficulty and, where necessary, specialist equipment or software. This will help to overcome barriers to learning and participation. Support should be family centred and should consider the individual family's needs and the best ways to support them.

5.34 Reviewing the effectiveness of interventions in enabling children to make progress can itself be part of the assessment of need, informing the next steps to be taken as part of a graduated approach to support, as described in 'SEN support in the early years' below. It may be necessary to test out interventions as part of this process, both to judge their effectiveness for the child and to provide further information about the precise nature of their needs.

5.35 There is a wide range of information available on early years and early intervention and on different areas of need and the most effective interventions. For more information and links to useful resources see Annex 2: Improving practice and staff training in education settings.
