

When to request a Community Care Education and Treatment Review (CETR) or Local Area Emergency Protocol (LAEP) for a Child or Young Person

CETRs do not replace case management and MDT processes and these processes should be exhausted before referral for a Community C(E)TR or a LAEP is considered

CETR Will only be considered if there is a significant risk of hospital admission (MH/LD hospital) in the near future

If the concern is around accommodation/placement breakdown, there should be a significant risk that the breakdown may result in a hospital admission (or admission into a residential care or education placement for children)
